

WHAT IS THE GET COVERED CALCULATOR?

The Get Covered Calculator is an interactive tool that provides individualized information to consumers about the amount of financial help they might qualify for with paying for health insurance.

The Calculator provides subsidy estimates for plans available in the health insurance marketplace, or whether consumers might qualify for Medicaid, CHIP, or Medicare. After calculating the cost estimate, the Calculator directs consumers to the appropriate marketplace or agency for their situation.

How Does It Work?

When a consumer enters some basic information — including ZIP code, household size, income, and age — they receive a personalized estimate of their monthly health insurance cost. The Calculator is free for anyone to embed on their website, and it's available in English and Spanish.

Why is This Important?

When consumers know they can get financial help, they're more likely to get covered. In fact, information about monthly premiums has been a larger driver for enrollment than information about the fine. By using the Get Covered Calculator, consumers can get a cost estimate for their unique situation.

Customization

A free, embeddable version of the Get Covered Calculator is available for you to host on your website. Contact us at Digital@EnrollAmerica.org if you are interested in partnering on a co-branded Calculator. For an additional fee, partners can access the Calculator API if they would prefer to customize the tool for integration into their website.

Enrollment Stats:

- 1 in 4 consumers who used the Get Covered Calculator immediately went on to start the enrollment process.
- Consumers who qualified for plans costing less than \$100 a month were twice as likely to start the enrollment process.
- Nearly 9 out of 10 who got covered got financial help.
